# East Calder Primary School

West Lothian, Scotland

## A new state-of-the-art, triangular-shaped, energy efficient school

A range of Metal Technology’s architectural glazing products were installed by approved fabricator Avtek Ltd in East Calder Primary – a new, triangular-shaped primary school. The eye-catching form creates an exciting environment that celebrates the joy of learning and provides an efficient external wall-to-floor ratio as well as a dynamic plan arrangement. The result is a high-quality learning environment with energy performance levels directly comparable to Passive House standards.

The school caters for 462 pupils and blends flexible collaborative and individual workspaces with outdoor play and learning spaces. Metal Technology products installed in the project included System 4-35 Hi/Hi+ Casement Window, System 17 Capped Curtain Walling and System 5-20D Hi+ Door. We’re proud to have worked with Morrison Construction and NORR architects on this fantastic, sustainable new education facility which delivers optimum energy performance and provides a high quality and inspiring learning environment for its pupils.
